

Did you know that COVID-19 and concussions share some of the same symptoms?

Why are we talking about COVID-19 and concussion in the same sentence?

Because the neurological symptoms of Long COVID-19, classified by the CDC as BRAIN FOG—difficulty thinking, remembering, concentrating, completing cognitive tasks quickly, emotional and behavioral reactions, are similar to the cognitive symptoms we have seen and researched for 20+ years in students following a concussion.

The Teacher Acute COVID/Concussion Tool (TACT) is the ONLY digital tool for return to learn Post-COVID-19!

No advanced training needed; No time out of the classroom!

The TACT delivers 4 weeks of COVID-19 academic support, via teacher email – in “real-time”—just when the student with Long COVID is ready to re-enter the classroom.

In the State of Nebraska, the Brain Injury Alliance of Nebraska has already purchased TACT for every school in the state.

Shared Symptoms of COVID-19 and Concussions

- Headache
- Fatigue
- Sleep Difficulties
- Mood Changes
- Mental Fatigue
- Dizziness
- Slowed Processing
- Trouble
 - Thinking
 - Concentrating
 - Focusing
